

## Appendix A State-Level Estimates of the Incidence of Crime

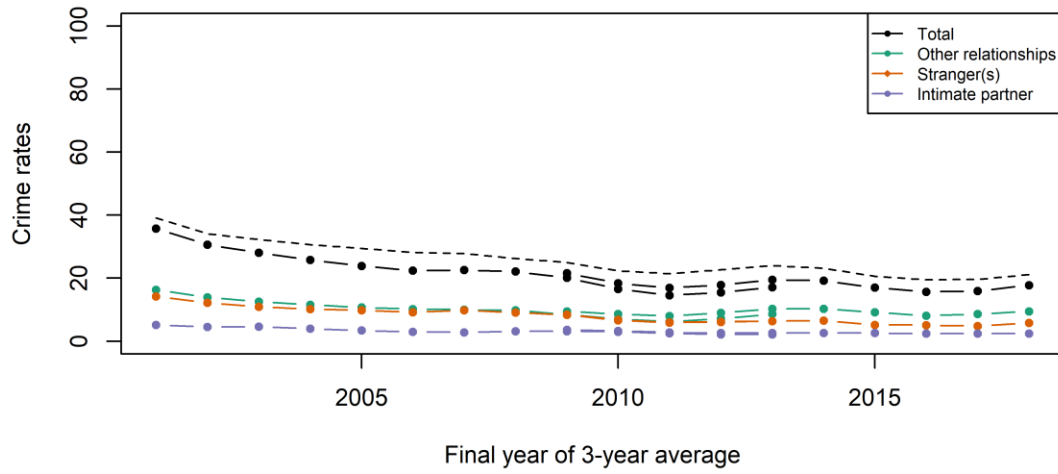

The graphs in this appendix depict the state-level small area estimates of the 3-year average incidence of crime. The rates are in the form of incidents per 1000 persons or households. Both the previously published estimates for 1999-2013 and the current estimates for 2007-2018 are shown.

For purposes of comparison, each graph also shows the national rates of either total violent or total property crime, as a dotted line. Violent crime rates are shown first, both by type of crime and relationship to the perpetrator, for all of the states. A single display of the estimates of property crime rates in each state follows.
